Project description

Design and build high available, scalable and secured architecture in AWS.

Automation of backups, deployments, maintenance and monitoring.

Performance and cost optimizations.

Migrated 100+ applications to AWS.

Deployed different software stacks on AWS- Java, .Net, RoR, PHP, Python

Implement configuration management tools- Chef, Ansible

Build and implement Backup and Disaster recover strategies.

Some of our clients' Testimonials

Lily Zhang, Founder & CEO
Lyndex Tech, Canada

TrinityWired developers are dedicative and hard working. Our dedicated team were responsible and trustworthy. They helped us with seven projects and always finished the project ahead of our deadline. We have been a long-term client to TrinityWired and continue to be one. I am so pleased to give this testimonial about TrinityWired.

Horatio Franco, Owner
Studio Four, Florida, USA

Our TrinityWired team put so much of extra work beyond their schedule. I offered to pay extra for their services and they never accepted it once. It's rare to see such people these days. Their service and quality of work are excellent and that's very valuable to us.

Deepak Agarwal, Founder
Dolmiti Solutions, USA

I had an A+ experience end to end working this team. Let me start by the excellent communication and responsiveness from beginning to the end. They kept me updated and always responded to my questions within minutes and instantly understood what I was looking for although I am not very technical. This made me feel very comfortable. If I had a change of heart during the build on features, color, etc., they were very accommodating.

A WOODBOWS GROUP COMPANY

About Us

We are fired up about welcoming you to our TrinityWired family. This is John, I accepted Jesus as my personal savior when I was doing my MS at the University of Houston, Texas. Let me share an interesting thing about a successful car dealer. He doesn't have any special cars or talented salesmen. However, everyone buys cars from him only. The only secret recipe he has is, honesty. He keeps only a fair profit margin and sells only quality cars that he would buy from others.

I strongly believe if you are honest, people will come to know about it soon. The opposite is true too. Another famous example is Walmart. Sam Walton was selling products for a fair profit margin. Though he didn't advertise about it, people came to know about it and his shop became famous in his area.

I follow the same in TrinityWired. We keep a fair profit margin and people started pouring in. We have been featured as the top app/software development just because of our honesty. We have been growing more than 200% in revenue every year.

Also, the number one requirement to work for our company is honesty. We emphasize on hiring honest developers to work for us. I am sure when you hire us for your projects, you will feel the difference too.

- John
